

Control Your Threat Exposure

CardinalOps Threat Exposure Management is the only AI-powered CTEM platform to integrate both prevention and detection controls in a unified view to drive intelligent prioritization and remediation of your riskiest exposures.

Dealing with the Complexity and High Volume of Security Findings

As the volume and complexity of threats continues to rise, organizations are investing in technology across endpoint, cloud, network, identity, and more to collect security findings and exposures. However, this has resulted in security that is spread out and fragmented across siloed tools, teams, and security layers, leaving an incomplete view of risk and exposure and an unclear path to effective remediation.

Pinpoint, Prioritize, and Remediate Exposure

The CardinalOps Threat Exposure Management Platform addresses the challenges facing security teams by providing unified visibility into exposure risk across multiple domains, facilitating context-driven prioritization, and automated and safe remediation.

With the unique context gained from fusing intelligence across your existing prevention and detection controls, the CardinalOps platform offers unparalleled clarity into your risk and exposure – uncovering actionable insights into compensating controls and streamlining consistent and efficient remediation workflows to proactively reduce risk and strengthen your security and detection engineering for the threats most relevant to you.

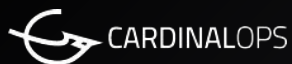

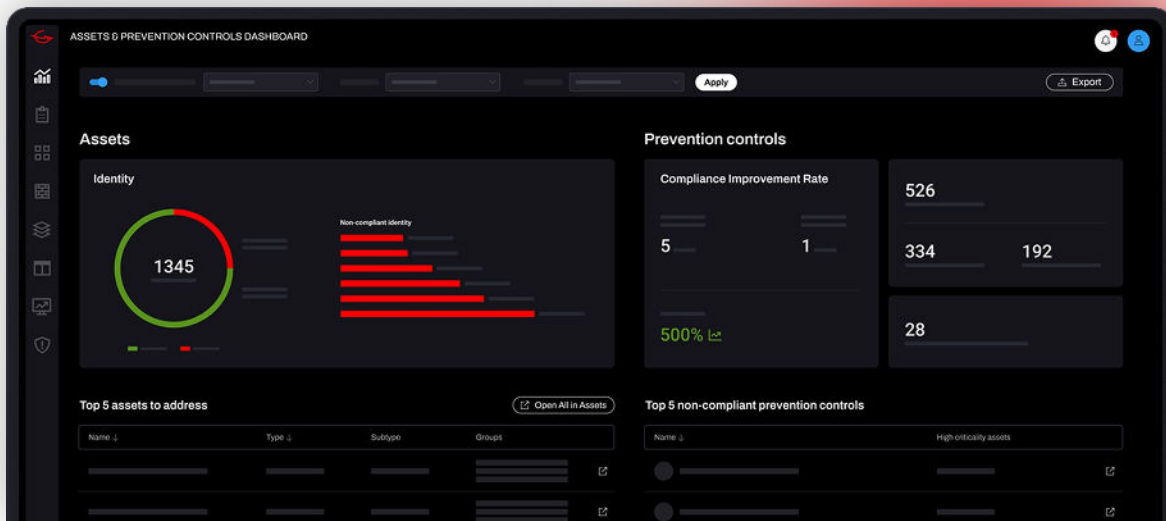

CardinalOps Threat Exposure Management Platform:

- **See Everything:** Visibility across prevention and detection controls
- **Focus on What Matters:** Identify and prioritize risk with asset and business context
- **Strengthen Defenses:** Align with MITRE ATT&CK and threat intel
- **Maximize Protection:** Optimize security with compensating controls
- **Remediate Faster:** Automate remediation for safer, faster response

Integrate Your Existing Security Stack
